Profile

Technical Project Manager with a frontend engineering background. I turn product requirements into specifications engineers can build against, set the delivery process between in-house teams and external agencies, and verify that what ships matches what was agreed. My work spans sprint delivery, requirements and QA, vendor contracts and commercial partnerships. PSM I certified, working remotely with teams anywhere.

Experience

Technical Project Manager, KEYS Community

Jan 2026 – Present

UK residential community platform on iOS and Android · Remote

- Lead technical delivery for the platform rebuild with a cross-functional team of about 12 across engineering, design and product, plus an external Flutter development agency.
- Negotiated the development process between the in-house team and the agency: two-week sprints, written committed scope, a shared Definition of Done, CODEOWNERS merge gates and per-feature ownership.
- Prepared the agency onboarding pack (project brief, MVP and release strategy, CI/CD specification) and coordinated contract changes with legal counsel.
- Built a requirement-level verification tracker for Phase 1, giving leadership a clear view of what the backend had delivered, partly delivered and missed, and an engineering handoff pack mapping screens to APIs.
- Reconciled PRDs against Figma designs, logged a decision for every discrepancy, and standardised the Phase 1 PRDs into one approved, versioned format.
- Took the admin panel from scope document to PRD v3.0 and a Jira backlog that front-loaded staff authentication, role-based access, 2FA and audit logging.
- Ran a stabilisation sprint for the legacy apps with readiness criteria, QA staging and a pre-release merge freeze; led a cloud and tooling cost review; onboarded a new Flutter lead.

Technical Project Manager, Bright Bridge Connect

Jan 2026 – Present

UK platform connecting care providers with housing · Remote

- Wrote end-to-end PRDs for each user type, including notification, activity timeline and escalation catalogues.
- Built a clickable prototype of every user journey with AI-assisted development, giving the design team a working reference before high-fidelity design.
- Ran design reviews against the prototype and turned PRDs into a requirements tracker the designer could work through.
- Negotiated a fixed-budget design-system engagement: reset the scope, agreed staged payment and secured a signed statement of work.
- Reviewed commercial agreements and flagged risks before legal review; maintained NDA and consultancy templates; set up an Airtable operations register with automations.

Technical Project Coordinator (Freelance), Africa Gaming Expo — Mar 2025 – Present

African gaming and fintech industry event (AGEAfrique) and affiliated businesses · Remote

- **Closed Kenya Airways as Official Airline Partner for AGE 2026**, owning the deal alone from cold outreach to signature, then ran the activation: delegate travel code, passes and entitlements.
- **Closed Ethiopian Airlines as Official Airline Partner for AGE 2027**, again from first cold outreach to close.
- Clarified requirements, wrote user stories and acceptance criteria, and coordinated QA and UAT across web and mobile, including a bug audit of the website and registration portals.
- Project-managed the AFRIPitch competition: stakeholders, timelines, communications and delivery.
- Designed and built the AGE 2026 attendee display-picture generator and the corporate website for Pinhole Services Nigeria Limited; built the GRAF 2026 keynote presentation for the Lagos State Lotteries and Gaming Authority.

Frontend Developer, Zenon — Mar 2024 – Feb 2025

Technology company behind Zenon Go (commerce, payments and logistics) · Remote

- Developed and maintained the company website (zenon.systems) with React, Next.js and JavaScript, integrating backend APIs with RTK Query.
- Turned high-fidelity designs into responsive pages and worked with product managers and backend engineers to ship production-ready features.

Frontend Developer Intern, Purejim Limited — Jan 2023 – Jan 2024

- Built Peng, a live wedding planning platform: onboarding, couple dashboard, website templates and gift registry (Next.js, TypeScript, Tailwind CSS, React Query).
- Built reusable components and worked with designers and backend engineers on each release.

Education and certifications

BSc Computer Science, Lagos State University · CGPA 4.11 / 5.0 — Aug 2021 – Oct 2024

Professional Scrum Master I (PSM I), Scrum.org · assessment score 100% — Nov 2025

Certificate in IT, British Computer Society (BCS) — Dec 2025

Skills

Delivery: Agile and Scrum, sprint planning, release readiness, dependency and critical-path analysis, agency and vendor governance, roadmapping

Requirements and QA: PRDs, user stories and acceptance criteria, requirements traceability, QA and UAT coordination, test planning

Technical: React, Next.js, TypeScript, JavaScript, REST APIs, Git and GitHub, CI/CD workflows, AI-assisted development

Commercial: partnership development, scope and budget negotiation, contract coordination, executive communication

Tools: Jira, Confluence, Notion, Plane, Figma, FigJam, Postman, Airtable, GitHub, Slack, Google Workspace, Microsoft Office, DocuSign
